Fernando Fariñas, Marisa Palmero, Rafael Astorga, 2021-08-24 T00:00:00+02:00 Correct vaccination of dogs and cats requires consideration of a broad range of clinical situations and vaccination options Using a thoroughly practical approach this book takes an in depth look at vaccines and vaccination to provide veterinary professionals with the information they require to address the many doubts and questions that arise in relation to this topic [Traditional Herbal Therapy for the Human](#)

Immune System Azamal Husen, 2021-10-28 Drawing on indigenous and scientific knowledge of medicinal plants Traditional Herbal Therapy for the Human Immune System presents the protective and therapeutic potential of plant based drinks supplements nutraceuticals synergy food superfoods and other products Medicinal plants and their products can affect the immune system and act as immunomodulators Medicinal plants are popularly used in folk medicine to accelerate the human immune defence and improve body reactions against infectious or exogenous injuries as well as to suppress the abnormal immune response occurring in immune disorders This book explains how medicinal plants can act as a source of vitamins and improve body functions such as enhanced oxygen circulation maintained blood pressure and improved mood It also outlines how specific properties of certain plants can help boost the immune system of humans with cancer HIV and COVID 19 Key features Provides specific information on how to accelerate and or fortify the human immune system by using medicinal plants Presents scientific understanding of herbs shrubs climbers and trees and their potential uses in conventional and herbal medicine systems Discusses the specific role of herbal plants that act as antiviral and antibacterial agents and offer boosted immunity for cancer H1N1 virus relieving swine flu HIV and COVID 19 patients Part of the Exploring Medicinal Plants series this book is useful for researchers and students as well as policy makers and people working in industry who have an interest in plant derived medications *The Complexities, Key Concepts and Mechanisms of Immunology* Seema Tripathy, Rashmi Rekha Sahu, 2024-07-23 This concise and comprehensive guide describes the complexities key concepts and mechanisms of the immune system in a simplified manner The book provides a clear and accessible overview of the body's defence mechanisms covering various aspects such as the structure and function of immune cells the mechanisms of antigen recognition and response the regulation of immune responses through the release of cytokines and dysfunctions of the immune system which lead to autoimmunity and hypersensitivity Additionally it covers different immunological techniques and the latest developments in immunotherapy including the use of monoclonal antibodies The multiple choice questions and answers provided at the end of each chapter will further enhance the understanding of the book's readership *Replicating And Repairing The Genome: From Basic Mechanisms To Modern Genetic Technologies* Kenneth N Kreuzer, 2020-03-16 Replicating and Repairing the Genome provides a concise overview of the fields of DNA replication and repair The book is particularly appropriate for graduate students and advanced undergraduates and scientists entering the field or working in related fields The breadth of information regarding DNA replication and repair is vast and often difficult to absorb with terminology that differs between experimental systems and with complex interconnections of these processes with other cellular pathways This book provides simple conceptual descriptions of replication and repair pathways using mostly generic protein names laying out the logic for how the pathways function and highlighting fascinating aspects of the underlying biochemical mechanisms and biology The book incorporates extensive and informative diagrams and figures as well as descriptions of a number of carefully chosen experiments that had major influences in the field The process of DNA

replication is explained progressively by starting with the system of a simple bacterial virus that uses only a few proteins followed by the well understood bacterial E coli system and then culminating with the more complex eukaryotic systems In the second half of the book individual chapters cover key areas of DNA repair postreplication repair of mismatches and incorporated ribonucleotides direct damage reversal excision repair and DNA break repair as well as the related areas of DNA damage tolerance including translesion DNA polymerases and DNA damage responses The book closes with chapters that describe the huge impact of DNA replication and repair on aspects of human health and on modern biotechnology

*Epidemiology of Endocrine Tumors* Jahangir Moini, Craig Badolato, Raheleh Ahangari, 2021-03-03 Epidemiology of Endocrine Tumors brings current data and clinical research into one source for a multidisciplinary audience The book discusses the prevalence incidence etiology pathology diagnosis and treatment of various endocrine tumors With clear and focused writing it is essential reading for healthcare professionals endocrinologists oncologists and public health professionals Users will be able to bridge the knowledge gap that exists in the comprehensive coverage surrounding the epidemiology of endocrine tumors Globally the prevalence and incidence of endocrine tumors is high This audience needs a treatise where they can gain a broad overview of endocrine tumors with a focus on epidemiology Supplies information about the epidemiology of various endocrine tumors both benign and malignant to endocrinologists oncologists and related health care professionals Focuses on the impact upon costs and patient deaths due to complications of these tumors Describes how endocrine tumors affect various age groups and ethnicities discussing the prevention of endocrine tumors Presents chapters on Cancer Problem Specific Endocrine Tumors Prevention Detection and Diagnosis and Treatment of Endocrine Tumors Provides review questions with an answer key and detailed glossary

Cancer Field Surgery in Gynecologic Oncology Michael Höckel, Rainer Kimmig, Ulrich Behn, 2025-05-13 This book encompasses the results of two decades of research on locoregional spread of gynecologic cancer which put forth the ontogenetic cancer field model and its clinical translation in terms of ontogenetic tumor staging and cancer field surgery particularly for carcinomas of the lower female genital tract The ontogenetic cancer field model describes the propagation of malignant tumors within distinct permissive tissue regions determined by the development of the tissue from which the neoplasm originated As the morphogenesis of multicellular animals proceeds stepwise through bifurcational cell fate specification within tissue regions dictated by the positional identity and plasticity of the precursor cell populations tumor formation during malignant progression occurs as a stepwise process in the reverse direction with regard to positional identity and plasticity This principle of order can be exploited for diagnosis treatment and prognosis of cancer in general The motivation to study in depth the topography of tumor spread arose from the insight that the conventional view of local cancer propagation as an unlimited isotropic process is falsified by numerous inconsistencies with clinical facts Consequently conventional cancer therapy based on this model cannot achieve optimal outcomes The cancer field model and its application in gynecologic oncology has been published in highly ranked

journals However the complexity of the principles and practice need the format of a well structured book for their successful transmission to gynecologic surgeons clinical oncologists cancer researchers and postgraduate medical students
