Programmed Visions Software And Memory Software Studies:

Programmed Visions Wendy Hui Kyong Chun, 2011-04-29 A theoretical examination of the surprising emergence of software as a guiding metaphor for our neoliberal world New media thrives on cycles of obsolescence and renewal from celebrations of cyber everything to Y2K from the dot com bust to the next big things mobile mobs Web 3.0 cloud computing In *Programmed Visions* Wendy Hui Kyong Chun argues that these cycles result in part from the ways in which new media encapsulates a logic of programmability New media proliferates programmed visions which seek to shape and predict even embody a future based on past data These programmed visions have also made computers based on metaphor metaphors for metaphor itself for a general logic of substitutability Chun argues that the clarity offered by software as metaphor should make us pause because software also engenders a profound sense of ignorance who knows what lurks behind our smiling interfaces behind the objects we click and manipulate The combination of what can be seen and not seen known knowable and not known its separation of interface from algorithm and software from hardware makes it a powerful metaphor for everything we believe is invisible yet generates visible logical effects from genetics to the invisible hand of the market from ideology to culture

Software Takes Command Lev Manovich, 2013-07-04 Offers the first look at the aesthetics of contemporary design from the theoretical perspectives of media theory and software studies *The Routledge Companion to Media Studies and Digital Humanities* Jentery Sayers, 2018-05-01 Although media studies and digital humanities are established fields their overlaps have not been examined in depth This comprehensive collection fills that gap giving readers a critical guide to understanding the array of methodologies and projects operating at the intersections of media culture and practice Topics include access praxis social justice design interaction interfaces mediation materiality remediation data memory making programming and hacking

Coding Literacy Annette Vee, 2017-07-28 How the theoretical tools of literacy help us understand programming in its historical social and conceptual contexts The message from educators the tech community and even politicians is clear everyone should learn to code To emphasize the universality and importance of computer programming promoters of coding for everyone often invoke the concept of literacy drawing parallels between reading and writing code and reading and writing text In this book Annette Vee examines the coding as literacy analogy and argues that it can be an apt rhetorical frame The theoretical tools of literacy help us understand programming beyond a technical level and in its historical social and conceptual contexts Viewing programming from the perspective of literacy and literacy from the perspective of programming she argues shifts our understandings of both Computer programming becomes part of an array of communication skills important in everyday life and literacy augmented by programming becomes more capacious Vee examines the ways that programming is linked with literacy in coding literacy campaigns considering the ideologies that accompany this coupling and she looks at how both writing and programming encode and distribute information She explores historical parallels between writing and programming using the evolution of mass textual literacy to

shed light on the trajectory of code from military and government infrastructure to large scale businesses to personal use Writing and coding were institutionalized domesticated and then established as a basis for literacy Just as societies demonstrated a literate mentality regardless of the literate status of individuals Vee argues a computational mentality is now emerging even though coding is still a specialized skill Speaking Code Geoff Cox,Alex McLean,2012-11-16 The aesthetic and political implications of working with code as procedure expression and action Speaking Code begins by invoking the Hello World convention used by programmers when learning a new language helping to establish the interplay of text and code that runs through the book Interweaving the voice of critical writing from the humanities with the tradition of computing and software development in Speaking Code Geoff Cox formulates an argument that aims to undermine the distinctions between criticism and practice and to emphasize the aesthetic and political implications of software studies Not reducible to its functional aspects program code mirrors the instability inherent in the relationship of speech to language it is only interpretable in the context of its distribution and network of operations Code is understood as both script and performance Cox argues and is in this sense like spoken language always ready for action Speaking Code examines the expressive and performative aspects of programming alternatives to mainstream development from performances of the live coding scene to the organizational forms of peer production the democratic promise of social media and their actual role in suppressing political expression and the market s emptying out of possibilities for free expression in the public realm Cox defends language against its invasion by economics arguing that speech continues to underscore the human condition however paradoxical this may seem in an era of pervasive computing How Machines Came to Speak Jennifer Petersen,2022-01-24 In How Machines Came to Speak Jennifer Petersen constructs a genealogy of how legal conceptions of speech have transformed over the last century in response to new media technologies Drawing on media and legal history Petersen shows that the legal category of speech has varied considerably evolving from a narrow category of oratory and print publication to a broad abstract conception encompassing expressive nonverbal actions algorithms and data She examines a series of pivotal US court cases in which new media technologies such as phonographs radio film and computer code were integral to this shift In judicial decisions ranging from the determination that silent films were not a form of speech to the expansion of speech rights to include algorithmic outputs courts understood speech as mediated through technology Speech thus became disarticulated from individual speakers By outlining how legal definitions of speech are indelibly dependent on technology Petersen demonstrates that future innovations such as artificial intelligence will continue to restructure speech law in ways that threaten to protect corporate and institutional forms of speech over the rights and interests of citizens *The Bloomsbury Handbook of Sex and Sexuality in Game Studies* Matthew Wysocki,Steffi Shook,2025-01-09 The Bloomsbury Handbook of Sex and Sexuality in Game Studies consists of a comprehensive collection of essays that review and supplement current work focusing on sex and sexuality in games The chapters provide insight into

sexual content in games representation of various sexualities and player experience Together they contribute to a growing field of work concerning two difficult to define phenomena the borders of sex and sexuality and video games As we frequently see debates and discussions over who gets to love whom and who gets to exist in their true self this handbook plays a part in outlining the parameters of crucial issues within the games that we play Media Backends Lisa Parks, Julia Velkova, Sander de Ridder, 2023-12-05 Exploring how we make distribute and consume today's media systems Media backends the electronics labor and operations behind our screens significantly influence our understanding of the sociotechnical relations economies and operations of media Lisa Parks Julia Velkova and Sander De Ridder assemble essays that delve into the evolving politics of the media infrastructural landscape Throughout the contributors draw on feminist queer and intersectional criticism to engage with infrastructural and industrial issues This focus reflects a concern about the systemic inequalities that emerge when tech companies and designers fail to address workplace discrimination and algorithmic violence and exclusions Moving from smart phones to smart dust the essayists examine topics like artificial intelligence human machine communication and links between digital infrastructures and public service media alongside investigations into the algorithmic backends at Netflix and Spotify Google's hyperscale data centers and video on demand services in India A fascinating foray into an expanding landscape of media studies Media Backends illuminates the behind the screen processes influencing our digital lives Contributors Mark Andrejevic Philippe Bouquillion Jonathan Cohn Faithe J Day Sander De Ridder Fatima Gaw Christine Ithurbide Anne Kaun Amanda Lagerkvist Alexis Logsdon Stine Lomborg Tim Markham Vicki Mayer Rahul Mukherjee Kaarina Nikunen Lisa Parks Vibodh Parthasarathi Philipp Seufferling Ranjit Singh Jacek Smolicki Fredrik Stiernstedt Matilda Tudor Julia Velkova and Zala Volcic **The Burden of Choice** Jonathan Cohn, 2019-03-01 The Burden of Choice examines how recommendations for products media news romantic partners and even cosmetic surgery operations are produced and experienced online Fundamentally concerned with how the recommendation has come to serve as a form of control that frames a contemporary American as heteronormative white and well off this book asserts that the industries that use these automated recommendations tend to ignore and obscure all other identities in the service of making the type of affluence they are selling appear commonplace Focusing on the period from the mid 1990s to approximately 2010 while this technology was still novel Jonathan Cohn argues that automated recommendations and algorithms are far from natural neutral or benevolent Instead they shape and are shaped by changing conceptions of gender sexuality race and class With its cultural studies and humanities driven methodologies focused on close readings historical research and qualitative analysis The Burden of Choice models a promising avenue for the study of algorithms and culture *Manual of Romance Languages in the Media* Kristina Bedijs, Christiane Maaß, 2017-09-25 This manual provides an extensive overview of the importance and use of Romance languages in the media both in a diachronic and synchronic perspective Its chapters discuss language in television and the new media the language of advertising or special cases such as translation platforms or subtitling Separate

chapters are dedicated to minority languages and smaller varieties such as Galician and Picard and to methodological approaches such as linguistic discourse analysis and writing process research

Lets delve into the realm of popular books, exploring the fascinating narratives that have charmed audiences this year. The Must-Read : Colleen Hoover's "It Ends with Us" This heartfelt tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover masterfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can triumph. Uncover the Best : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This spellbinding historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids captivating storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Discover the Magic : Delia Owens "Where the Crawdads Sing" This captivating coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens spins a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting. These bestselling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of captivating stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and gripping novel that will keep you wondering until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
