Programming Web Services with XML-RPC Simon St. Laurent,Joe Johnston,Edd Wilder-James,Dave Winer,2001-06-21 Have you ever needed to share processing between two or more computers running programs written in different languages on different operating systems Or have you ever wanted to publish information on the Web so that programs other than browsers could work with it XML RPC a system for remote procedure calls built on XML and the ubiquitous HTTP protocol is the solution you ve been looking for Programming Web Services with XML RPC introduces the simple but powerful capabilities of XML RPC which lets you connect programs running on different computers with a minimum of fuss by wrapping procedure calls in XML and establishing simple pathways for calling functions With XML

RPC Java programs can talk to Perl scripts which can talk to Python programs ASP applications and so on You can provide access to procedure calls without having to worry about the system on the other end so it s easy to create services that are available on the Web XML RPC isn t the only solution for web services the Simple Object Access Protocol SOAP is another much hyped protocol for implementing web services While XML RPC provides fewer capabilities than SOAP it also has far fewer interoperability problems and its capabilities and limitations are much better understood XML RPC is also stable with over 30 implementations on a wide variety of platforms so you can start doing real work with it immediately Programming Web Services with XML RPC covers the details of five XML RPC implementations so you can get started developing distributed applications in Java Perl Python ASP or PHP The chapters on these implementations contain code examples that you can use as the basis for your own work This book also provides in depth coverage of the XML RPC specification which is helpful for low level debugging of XML RPC clients and servers And if you want to build your own XML RPC implementation for another environment the detailed explanations in this book will serve as a foundation for that work

Programming .NET Web Services Alex Ferrara,Matthew MacDonald,2002 This complete comprehensive reference is for both experienced Perl programmers and beginners The book includes all the basic documentation for the core Perl languages

Real World Web Services Will Iverson,2004-10-04 The core idea behind Real World Web Services is simple after years of hype what are the major players really doing with web services Standard bodies may wrangle and platform vendors may preach but at the end of the day what are the technologies that are actually in use and how can developers incorporate them into their own applications Those are the answers Real World Web Services delivers It s a field guide to the wild and wooly world of non trivial deployed web services The heart of the book is a series of projects demonstrating the use and integration of Google Amazon eBay PayPal FedEx and many more web services Some of these vendors have been extremely successful with their web service deployments for example eBay processes over a billion web service requests a month The author focuses on building 8 fully worked out example web applications that incorporate the best web services available today The book thoroughly documents how to add functionality like automating listings for auctions dynamically calculating shipping fees automatically sending faxes to your suppliers using an aggregator to pull data from multiple news and web service feeds into a single format or monitoring the latest weblog discussions and Google searches to keep web site visitors on top of topics of interest by integrating APIs from popular websites most people are already familiar with For each example application the author provides a thorough overview architecture and full working code examples This book doesn t engage in an intellectual debate as to the correctness of web services on a theological level Instead it focuses on the practical real world usage of web services as the latest evolution in distributed computing allowing for structured communication via Internet protocols As you ll see this includes everything from sending HTTP GET commands to retrieving an XML document through the use of SOAP and various vendor SDKs
