Progress In Zeolites Science A China Perspective:

Progress In Zeolites Science: A China Perspective Ru Ren Xu, 1995-05-31 The chemistry of microporous materials is among the most rapidly developing fields of chemical research It is extended from the conventional zeolites which are mineral aluminosilicates with microporous host lattice structures Both zeolites and microporous crystalline materials are molecular sieves which possess open frameworks in which guest species like water and amines or quaternary ammoniums known as templates can be accommodated Upon the removal of guest species they demonstrate adsorptive and catalytic properties owing to their surface activity as well as the selective character of the structural frameworks There is a huge population of zeolite scientists in China who conduct intensive and interesting studies on these materials The present review volume intends to draw an outline of the major research activities and achievement in the area of zeolite science in China

Chemistry of Zeolites and Related Porous Materials Ruren Xu, Wenqin Pang, Jihong Yu, Qisheng Huo, Jiesheng Chen, 2009-05-29 Widely used in adsorption catalysis and ion exchange the family of molecular sieves such as zeolites has been greatly extended and many advances have recently been achieved in the field of molecular sieves synthesis and related porous materials Chemistry of Zeolites and Related Porous Materials focuses on the synthetic and structural chemistry of the major types of molecular sieves It offers a systematic introduction to and an in depth discussion of microporous mesoporous and macroporous materials and also includes metal organic frameworks Provides focused coverage of the key aspects of molecular sieves Features two frontier subjects molecular engineering and host guest advanced materials Comprehensively covers both theory and application with particular emphasis on industrial uses This book is essential reading for researchers in the chemical and materials industries and research institutions The book is also indispensable for researchers and engineers in R D for catalysis divisions of companies in petroleum refining and the petrochemical and fine chemical industries
