Type-Safe Programming for the Semantic Web Martin Leinberger, 2021-10-15 Graph based data formats are a flexible way of representing data semantic data models in particular where the schema is part of the data and have become more popular and had some commercial success in recent years Semantic data models are also the basis for the Semantic Web a Web of data governed by open standards in which computer programs can freely access the data provided This book is about checking the correctness of programs that can access semantic data Although the flexibility of semantic data models is one of their greatest strengths it can lead programmers to accidentally fail to account for unintuitive edge

cases leading to run time errors or unintended side effects during program execution A program may even run for a long time before such an error occurs and the program crashes Providing a type system is an established methodology for proving the absence of run time errors in programs without requiring execution The book defines type systems that can detect and avoid such run time errors based on schema languages available for the Semantic Web Using the Web Ontology Language OWL and its theoretic underpinnings i e description logics and the Shapes Constraint Language SHACL in particular the book defines systems that can provide type safe data access to semantic data graphs The book is divided into 3 parts Part I contains an introduction and preliminaries Part II covers type systems for the Semantic Web and Part III includes related work and conclusions

Answer Set Programming for the Semantic Web Roman Schindlauer, 2008 The idea behind the Semantic Web is to add machine readable meaning to Web pages enabling the automated interpretation of their semantic content and thus improving the way we express search and discover knowledge in the Internet The Semantic Web requires not only a suitable knowledge representation formalism to describe such data but also a rule language to specify how to process it This book represents a contribution to the research efforts of integrating rule based inference methods with Semantic Web vocabulary languages The author Roman Schindlauer first introduces the concepts benefits and challenges of such a combination in general He then proposes a novel integration of logic programming under the answer set semantics with the Web ontology language OWL Moreover he outlines a prototype implementation and presents use cases on the basis of concrete real world scenarios This book is intended for researches and professionals in the areas of logic programming and Semantic Web reasoning
