Managing Project Ending Virpi Havila, Asta Salmi, 2008-10-06 Understanding project endings is a significant part of project management yet there is relatively little work published in this important area This book addresses the gap focusing on the successful

management of project endings showing how to plan for the ending of a project how to create ending competencies and in particular how to successfully manage relations with different stakeholders of a project as it is coming to an end Havila and Salmi use a real life case in the airline industry to show how the successful ending project was achieved and in doing so portray ideas and experiences not typically considered in the field Through the case discussion the complexity of the process is unveiled and the achievement of success for all parties is explained The book portrays three key success factors ending competencies to be developed both at the organizational and individual levels efficient management of the business network around the ending project and involvement at the strategic managerial level It concludes that project endings are often complex and have far reaching effects and therefore call for close managerial attention

Project Managers' Leadership Styles in Information Technology Sector of Pakistan Muhammad Khaliq Ahmad, Abu Bakar Abdul Hamid, Sazali ABD Wahab, 2021-10-26 In these competitive and turbulent times project organisations face severe challenges Despite the advancement of project management tools and techniques the rate of project failure exceeds that of success Regardless of calls for further empirical studies on the role of project leadership researchers struggle to find the best leadership styles for project success New digital transformation phenomena have forced organisations to offer more autonomy and decision making authority to those at lower hierarchical levels In this scenario top management support plays a facilitator role To the best of the researcher's knowledge no past studies have examined these critical project success factors simultaneously in a project environment Embedded in the theories of contingency goal setting and social cognition this study raised the hypothesis that project managers leadership styles impact project success via the mediation of goal clarity empowerment and self leadership as well as the moderation of top management support Data was collected by administering a cross sectional survey to 289 project organisations in the IT sector The results demonstrated that project managers transactional leadership style does not impact project success because goal clarity has an insignificant association with project success However the transformational leadership style showed a positive impact on project success because empowerment significantly and positively relates to project success The project manager's empowering leadership style was also found to positively influence project success through followers self leadership Additionally top management support revealed a significant moderating role by strengthening the relationship between empowerment and project success This study successfully fills theoretical gaps by introducing a novel moderated mediation model The findings also offer useful insights to practitioners by revealing that project managers transformational leadership and empowering leadership are needed to enhance and encourage employee empowerment and self leadership and ultimately secure project success
