Architectures Ralf Steinmetz, 1994-09-21 This volume contains the proceedings of the Second International Workshop on Advanced Teleservices and High Speed Communication Architectures IWACA 94 held in Heidelberg Germany in September 1994 The IWACA Workshop is a platform for the exchange among researchers and developers from both the multimedia applications and the high speed telecommunication communities The book presents revised versions of the 36 papers accepted for presentation at the workshop They cover several aspects of multimedia applications and asynchronous transfer mode ATM and focus on ATM LANs and ATM for the wide area high performance network of the future *European Optical Communications and Networks*, 1994 *Multimedia Applications, Services and Techniques - ECMAS'98* David

Hutchinson, Ralf Schäfer, 1998-05-18 This book constitutes the refereed proceedings of the Third European Conference on Multimedia Applications Services and Techniques ECMAS'98 held in Berlin Germany in May 1998 The 40 revised full papers presented were carefully selected for inclusion in the book by the program committee The topics covered include multimedia networks and protocols coded representation of images sound and data multimedia delivery on broadcast and telecom networks servers and storage architectures advanced multimedia terminals and in house networks multimedia services Internet and multimedia scenario and multimedia trials **High-Performance Networks for Multimedia**

Applications Andre Danthine, Otto Spaniol, Wolfgang Effelsberg, Domenico Ferrari, 2012-12-06 High Performance Networks for Multimedia Applications presents the latest research on the services and protocols for networks providing the communication support for distributed multimedia applications The need for end to end QoS for these multimedia applications is raising the stakes for a powerful shaping and scheduling in the network adapter It is also creating a need for new services at the ATM layer CBR and VBR being augmented by UBR ABR and GFR which have to be evaluated in the TCP IP environment of today and tomorrow With the pressure of all the new technologies available today the backbone architecture needs to be revisited and the success of the TCP IP must not eliminate the possibility of adding a native ATM access to it Most of the research in communication services such as IntServ DiffServ and Native ATM is driven by the requirements of multimedia systems and this book illustrates the new emphasis by bringing telecommunication and computer communication experts together with application designers This is particularly true for the security issues also addressed

here Last but not least modeling techniques and mathematical models are essential to assess the performance of the networks to be built and to evaluate next century scenarios unachievable by a simple scaling of today's solutions

High Performance Networks for Multimedia Applications is a collection of high quality research papers and the in depth treatment of the subjects provides interesting and innovative solutions It is an essential reference for telecommunication and computer experts and QoS based application designers It is also a comprehensive text for graduate students in high performance networks and multimedia applications

Multimedia, Telecommunications, and Applications Giorgio Ventre, Jordi Domingo-Pascual, Andre Danthine, 1996-11-19 This book constitutes the refereed proceedings of the Third International COST 237 Workshop held in Barcelona Spain in November 1996 The 15 revised full papers presented in the volume were carefully selected from a total of 34 submissions by COST project participants as well as from outside The papers are organized in sections on multipoint and group communication quality of service applications and teleservices multimedia protocols and platforms and performance studies

Multimedia Information Storage and Management Soon M. Chung, 1996-08-31 Multimedia information systems are quite different from traditional information systems especially in data types modeling delivery and user interface The large size of multimedia data and the high bandwidth requirement of multimedia streams require new storage buffering delivery and networking schemes The presentational nature of multimedia applications requires a proper synchronization between multimedia streams and the composition of multimedia documents in the distributed environment should overcome the heterogeneity of underlying systems This book is edited for undergraduate and graduate students studying multimedia

information and applications researchers and developers of various multimedia software and hardware systems multimedia tool developers user interface designers and network protocol designers by including 17 chapters focused on the following major issues Disk scheduling and storage hierarchy Configuration of multimedia servers and buffer management Delivery scheduling for multimedia streams Supporting user interactions Document modeling and temporal modeling of multimedia data Integrated multimedia information system *MULTIMEDIA TRANSPORT AND TELESERVICES* David Hutchison, Andre Danthine, 1994 **Internetworking Multimedia** Jon Crowcroft, 1999-08-26 This volume aims to document the authors prescription for the architecture the way the component services are fitted together to provide collaborative tools for video audio and shared workspaces The authors have decided to take a new approach to the field by using a prescriptive rather than descriptive style The text is aimed at technical readers such as developers undergraduate or postgraduate MSc courses on multimedia and networking and professionals The subjects covered include the network requirements the media encoding techniques including basic compression techniques the protocols rtp rtcp rsvp etc the distributed algorithms for synchronization reliability security and so on
