Queuing Theory And Telecommunication: Networks And Applications Giambene Giovanni, 2007-11-01

Introduction to Queueing Systems with Telecommunication Applications Laszlo Lakatos, Laszlo Szeidl, Miklos Telek, 2012-12-15 The book is composed of two main parts mathematical background and queueing systems with applications The mathematical background is a self containing introduction to the stochastic processes of the later studies queueing systems It starts with a quick introduction to probability theory and stochastic processes and continues with chapters on Markov chains and regenerative processes More recent advances of queueing systems are based on phase type distributions Markov arrival processes and quasi birth death processes which are introduced in the last chapter of the first part The second part is devoted to queueing models and their applications After the introduction of the basic Markovian from M/M/1 to M/M/1/N and non Markovian M/G/1 G/M/1 queueing systems a chapter presents the analysis of queues with phase type distributions Markov arrival processes from PH/M/1 to MAP/PH/1/K The next chapter presents the classical queueing network results and the rest of this part is devoted to the application examples There are queueing models for bandwidth sharing with different traffic classes slotted multiplexers ATM switches media access protocols like Aloha and IEEE 802.11b priority systems and retrial systems An appendix supplements the technical content with Laplace and z transformation rules Bessel functions and a list of notations The book contains examples and exercises throughout and could be used for graduate students in engineering mathematics and sciences
