Set Valued Mappings And Enlargements Of Monotone Operators Springer Optimization And Its Applications:

Set-Valued Mappings and Enlargements of Monotone Operators Regina S. Burachik, Alfredo N. Iusem, 2007-11-15 Set valued analysis is an essential tool for the mathematical formulation of many real life situations e g equilibrium theory in mathematical economics This work offers the first comprehensive treatment in book form of the fairly new subdiscipline of enlargements of maximal monotone operators including several important new results in the field In the last decades with the development of nonsmooth optimization effective algorithms have been developed to solve these kinds of problems such as nonsmooth variational inequalities Several of these methods such as bundle methods for variational problems are fully developed and analyzed in this book The first chapters provide a self contained review of the basic notions and fundamental results in set valued analysis including set convergence and continuity of set valued mappings together with many important results in infinite dimensional convex analysis leading to the classical fixed point results due to Ekeland Caristi and Kakutani Next an in depth introduction to monotone operators is developed emphasizing results related to maximality of subdifferentials and of sums of monotone operators Building on this foundational material the second part of the monograph contains new results all of them established during the last decade on the concept of enlargements of monotone operators with applications to variational inequalities bundle type methods augmented Lagrangian methods and proximal point algorithms Splitting Algorithms, Modern Operator Theory, and Applications Heinz H. Bauschke, Regina S. Burachik, D. Russell Luke, 2019-11-06 This book brings together research articles and state of the art surveys in broad areas of optimization and numerical analysis with particular emphasis on algorithms The discussion also focuses on advances in monotone operator theory and other topics from variational analysis and nonsmooth optimization especially as they pertain to algorithms and concrete implementable methods The theory of monotone operators is a central framework for understanding and analyzing splitting algorithms Topics discussed in the volume were presented at the interdisciplinary workshop titled Splitting Algorithms Modern Operator Theory and Applications held in Oaxaca Mexico in September 2017 Dedicated to Jonathan M Borwein one of the most versatile mathematicians in contemporary history this compilation brings theory together with applications in novel and insightful ways Computational and Analytical Mathematics David H. Bailey, Heinz H. Bauschke, Peter Borwein, Frank Garvan, Michel Théra, Jon D. Vanderwerff, Henry Wolkowicz, 2013-09-15 The research of Jonathan Borwein has had a profound impact on optimization functional analysis operations research mathematical programming number theory and experimental mathematics Having authored more than a dozen books and more than 300 publications Jonathan Borwein is one of the most productive Canadian mathematicians ever His research spans pure applied and computational mathematics as well as high performance computing and continues to have an enormous impact MathSciNet lists more than 2500 citations by more than 1250 authors and Borwein is one of the 250 most cited mathematicians of the period 1980 1999 He has served the Canadian Mathematics Community through his presidency 2000

02 as well as his 15 years of editing the CMS book series Jonathan Borwein's vision and initiative have been crucial in initiating and developing several institutions that provide support for researchers with a wide range of scientific interests A few notable examples include the Centre for Experimental and Constructive Mathematics and the IRMACS Centre at Simon Fraser University the Dalhousie Distributed Research Institute at Dalhousie University the Western Canada Research Grid and the Centre for Computer Assisted Research Mathematics and its Applications University of Newcastle The workshops that were held over the years in Dr Borwein's honor attracted high caliber scientists from a wide range of mathematical fields This present volume is an outgrowth of the workshop on Computational and Analytical Mathematics held in May 2011 in celebration of Dr Borwein's 60th Birthday The collection contains various state of the art research manuscripts and surveys presenting contributions that have risen from the conference and is an excellent opportunity to survey state of the art research and discuss promising research directions and approaches

Infinite Products of Operators and Their Applications Simeon Reich, Alexander J. Zaslavski, 2015-03-30 This volume contains the proceedings of the workshop on Infinite Products of Operators and Their Applications held from May 21-24 2012 at the Technion Israel Institute of Technology Haifa Israel The papers cover many different topics regarding infinite products of operators and their applications projection methods for solving feasibility and best approximation problems arbitrarily slow convergence of sequences of linear operators monotone operators proximal point algorithms for finding zeros of maximal monotone operators in the presence of computational errors the Pascoletti Serafini problem metrization for infinite families of mappings Poisson's equation for mean ergodic operators vector valued metrics in fixed point theory contractivity of infinite products and mean convergence theorems for generalized nonspreeding mappings This book is co published with Bar Ilan University Ramat Gan Israel

Nonsmooth Optimization and Its Applications Seyedehsomayeh Hosseini, Boris S. Mordukhovich, André Uschmajew, 2019-03-29 Since nonsmooth optimization problems arise in a diverse range of real world applications the potential impact of efficient methods for solving such problems is undeniable Even solving difficult smooth problems sometimes requires the use of nonsmooth optimization methods in order to either reduce the problem's scale or simplify its structure Accordingly the field of nonsmooth optimization is an important area of mathematical programming that is based on by now classical concepts of variational analysis and generalized derivatives and has developed a rich and sophisticated set of mathematical tools at the intersection of theory and practice This volume of ISNM is an outcome of the workshop Nonsmooth Optimization and its Applications which was held from May 15 to 19 2017 at the Hausdorff Center for Mathematics University of Bonn The six research articles gathered here focus on recent results that highlight different aspects of nonsmooth and variational analysis optimization methods their convergence theory and applications

Mathematical Analysis and Applications Themistocles M. Rassias, Panos M. Pardalos, 2019-12-12 An international community of experts scientists comprise the research and survey contributions in this volume which covers a broad

spectrum of areas in which analysis plays a central role Contributions discuss theory and problems in real and complex analysis functional analysis approximation theory operator theory analytic inequalities the Radon transform nonlinear analysis and various applications of interdisciplinary research some are also devoted to specific applications such as the three body problem finite element analysis in fluid mechanics algorithms for difference of monotone operators a vibrational approach to a financial problem and more This volume is useful to graduate students and researchers working in mathematics physics engineering and economics

Convexity from the Geometric Point of View Vitor Balestro, Horst Martini, Ralph Teixeira, 2024-07-14 This text gives a comprehensive introduction to the common core of convex geometry Basic concepts and tools which are present in all branches of that field are presented with a highly didactic approach Mainly directed to graduate and advanced undergraduates the book is self contained in such a way that it can be read by anyone who has standard undergraduate knowledge of analysis and of linear algebra Additionally it can be used as a single reference for a complete introduction to convex geometry and the content coverage is sufficiently broad that the reader may gain a glimpse of the entire breadth of the field and various subfields The book is suitable as a primary text for courses in convex geometry and also in discrete geometry including polytopes It is also appropriate for survey type courses in Banach space theory convex analysis differential geometry and applications of measure theory Solutions to all exercises are available to instructors who adopt the text for coursework Most chapters use the same structure with the first part presenting theory and the next containing a healthy range of exercises Some of the exercises may even be considered as short introductions to ideas which are not covered in the theory portion Each chapter has a notes section offering a rich narrative to accompany the theory illuminating the development of ideas and providing overviews to the literature concerning the covered topics In most cases these notes bring the reader to the research front The text includes many figures that illustrate concepts and some parts of the proofs enabling the reader to have a better understanding of the geometric meaning of the ideas An appendix containing basic and geometric measure theory collects useful information for convex geometers
