Anticancer Drug Discovery and Development: Natural Products and New Molecular Models Frederick A. Valeriote, Thomas H. Corbett, Laurence H. Baker, 1994-07-31 With the publication of these proceedings from the Second Drug Discovery and Development Symposium this forum has become the main mechanism for bringing together the principal groups involved in both discovering and developing new approaches to the treatment of cancer This Second Symposium emphasized the types of materials being discovered and their therapeutic

activity This is especially evident in the natural product discovery programs where unique and active structures are being identified The major contributors to the meeting were the investigators participating in the National Cooperative Natural Products Drug Discovery Groups NC NP DDG These groups reflect an association among researchers at universities or cancer centers pharmaceutical companies and the National Cancer Institute Their sources of materials are varied reflecting chemical inventories of pharmaceutical companies organic synthetic compounds from the laboratory cytotoxics as well as biologics and their hybrids and natural products obtained from plants marine organisms and microorganisms The models employed in the discovery systems vary from broadly cellular based to specific enzymes to defined cellular functions Each of them is believed important to the malignant state and will allow for the discovery of compounds which will have efficacy in cancer therapy The goal of the participants is both to discover new anticancer agents and to develop them as efficiently as possible into clinically useful additions to treatment Of importance is the fact that there are a number of promising leads which will soon be moving into the clinic thereby testing the effectiveness of this NC NP DDG approach

Anticancer Drug Development Bruce C. Baguley, David J. Kerr, 2001-11-17 Here in a single source is a complete spectrum of ideas on the development of new anticancer drugs Containing concise reviews of multidisciplinary fields of research this book offers a wealth of ideas on current and future molecular targets for drug design including signal transduction the cell division cycle and programmed cell death Detailed descriptions of sources for new drugs and methods for testing and clinical trial design are also provided One work that can be consulted for all aspects of anticancer drug development Concise reviews of research fields combined with practical scientific detail written by internationally respected experts A wealth of ideas on current and future molecular targets for drug design including signal transduction the cell division cycle and programmed cell death Detailed descriptions of the sources of new anticancer drugs including combinatorial chemistry phage display and natural products Discussion of how new drugs can be tested in preclinical systems including the latest technology of robotic assay systems cell culture and experimental animal techniques Hundreds of references that allow the reader to access relevant scientific and medical literature Clear illustrations some in color that provide both understanding of the field and material for teaching

New Approaches in Cancer Pharmacology: Drug Design and Development Paul Workman, 2012-12-06 The European School of Oncology came into existence to respond to a need for information education and training in the field of the diagnosis and treatment of cancer There are two main reasons why such an initiative was considered necessary Firstly the teaching of oncology requires a rigorously multidisciplinary approach which is difficult for the Universities to put into practice since their system is mainly disciplinary orientated Secondly the rate of technological development that impinges on the diagnosis and treatment of cancer has been so rapid that it is not an easy task for medical faculties to adapt their curricula flexibly With its residential courses for organ pathologies and the seminars on new techniques laser monoclonal antibodies imaging techniques etc or on the principal therapeutic controversies conservative or mutilating surgery primary

or adjuvant chemotherapy radiotherapy alone or integrated it is the ambition of the European School of Oncology to fill a cultural and scientific gap and thereby create a bridge between the University and Industry and between these two and daily medical practice One of the more recent initiatives of ESO has been the institution of permanent study groups also called task forces where a limited number of leading experts are invited to meet once a year with the aim of defining the state of the art and possibly reaching a consensus on future developments in specific fields of oncology Anticancer Drug Development Guide Beverly A. Teicher, 2013-11-11 Experienced cancer researchers from pharmaceutical companies government laboratories and academia comprehensively review and describe the arduous process of cancer drug discovery and approval They focus on using preclinical in vivo and in vitro methods to identify molecules of interest detailing the targets and criteria for success in each type of testing and defining the value of the information obtained from the various tests They also define each stage of clinical testing explain the criteria for success and outline the requirements for FDA approval A companion volume by the same editor Cancer Therapeutics Experimental and Clinical Agents reviews existing anticancer drugs and potential anticancer therapies These two volumes in the Cancer Drug Discovery and Development series reveal how and why molecules become anticancer drugs and thus offer a blueprint for the present and the future of the field
