Fisman, Tim Sullivan, 2016-06-07 America's economic revolution isn't just driven by technology. It's about markets. The past twenty-five years have witnessed a remarkable shift in how we get the stuff we want. If you've ever owned a business, rented an apartment, or shopped online, you've had a front-row seat for this revolution in progress. Breakthrough companies like Amazon and Uber have disrupted the old ways and made the economy work better, all thanks to technology. At least that's how the story of the modern economy is usually told. But in this lucid, wry book, Ray Fisman and Tim Sullivan show that the revolution is bigger than tech; it is really a story about the transformation of markets. From the auction theories that power Google's ad sales algorithms to the models that online retailers use to prevent internet fraud, even the most high-tech, modern businesses are empowered by theory first envisioned by economists. And we're all participants in this revolution. Every time you book a room on Airbnb, hire a car on Lyft, or click on an ad, you too are reshaping our social institutions and our lives. **The Inner Lives of Markets** is necessary reading for the modern world; it reveals the blueprint for how we work, live, and shop, and offers wisdom for how to do it better.

International Encyclopedia of Transportation, 2021-05-13 In an increasingly globalised world, despite reductions in costs and time, transportation has become even more important as a facilitator of economic and human interaction. This is reflected in technical advances in transportation systems, increasing interest in how transportation interacts with society, and the need to provide novel approaches to understanding its impacts. This has become particularly acute with the impact that Covid-19 has had on transportation across the world, at local, national, and international levels. **Encyclopedia of Transportation**, Seven Volume Set, containing almost 600 articles, brings a cross-cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields, including engineering, operations research, economics, geography, and sociology, in order to understand the changes taking place. Emphasising the interaction between these different aspects of research, it offers new solutions to modern-day problems related to transportation. Each of its nine sections is based around familiar themes but brings together the views of experts from different disciplinary perspectives. Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines, different parts of the world, and different social perspectives. The nine sections are structured around the following themes: Transport Modes; Freight Transport and Logistics; Transport Safety and Security; Transport Economics; Traffic Management; Transport Modelling and Data Management; Transport Policy and Planning; Transport Psychology; Sustainability and Health Issues in Transportation. Some articles provide a technical introduction to a topic, whilst others provide a bridge between topics or a more future-oriented view of new research areas or challenges. The end result is a reference work that offers researchers and practitioners new approaches, new ways of thinking, and novel solutions to problems. All encompassing and expertly authored, this outstanding reference work will be essential reading for

all students and researchers interested in transportation and its global impact in what is a very uncertain world Provides a forward looking and integrated approach to transportation Updated with future technological impacts such as self driving vehicles cyber physical systems and big data analytics Includes comprehensive coverage Presents a worldwide approach including sets of comparative studies and applications
