RFID in the Supply Chain Judith M. Myerson, 2006-11-20 Giving organizations the ability to track secure and manage items from the time they are raw materials through the life cycle of the product radio frequency identification RFID makes internal processes more efficient and improves overall supply chain responsiveness Helping you bring your organization into the future RFID in the Supply Ch *RFID in Logistics* Erick C. Jones, Christopher A. Chung, 2007-12-03 Radio Frequency Identification RFID tagging is now mandated by the department of defense and many of the world's largest retailers including Wal Mart In order to stay competitive more than 200 000 manufacturers and suppliers must develop strategies for integrating RFID technologies into their supply chains RFID in Logistics A Practical Introd *RFID in Operations and Supply Chain Management* Thorsten Blecker, 2008

RFID technology introduction and impacts on supply chain management systems Roman Christian Rochel, 2005-11-15 Seminar paper from the year 2005 in the subject Business economics Supply Production Logistics grade 1 3 European Business School International University Schlo Reichartshausen Oestrich Winkel Supply Management Institute course Seminar of Logistics and Business Engineering language English abstract Today's businesses face a dynamic and competitive environment which results in an ever increasing pressure on them to innovate reinvent processes and leverage the potential of supply chain partnerships Current supply chain trends as mentioned by McFarlane and Sheffi include globalization outsourcing stock keeping unit SKU proliferation and shorter product lifecycles 1 To enable these trends and to master the inherent challenges companies must at all times have information and visibility about shipments products and progress Yet this strongly needed information and visibility is not limited to the internal company supply chain but rather along the entire supply chain from the original supplier to the end customer Thus external supply chain integration on the basis of fine granularity of data has to be one of the primary objectives in today's supply chain management efforts One of the emerging technologies offering a solution for this aim is Radiofrequency Identification RFID RFID can facilitate automating and streamlining identification processes This means more checkpoints along the supply chain can be established at decreased costs However not limited to that purpose the technology offers additional benefits which make it superior to the automatic identification Auto ID technology of the barcode currently in widespread use Nonetheless RFID is only a data collection technology which must be integrated with the supply chain management systems of the companies Furthermore along the supply chain various information systems must be integrated in order to give a meaning to the data and to allow for information exchange Although RFID technology has originally been developed decades ago the industrial use of RFID in large scale supply chain operations has until now been prohibited due to the relatively high costs compared to other Auto ID solutions Recent mandates of large retail companies such as WalMart and Metro Group force suppliers in the position where they have to implement the technology without proper knowledge about it Additionally there are still several technical as well as rather political barriers to be solved This

seminar paper deals with RFID technology introduction and impacts on supply chain management systems in order to give an insight into the current issues and status of the technology **RFID in the Supply Chain** Judith M. Myerson, 2006-11-20

Giving organizations the ability to track secure and manage items from the time they are raw materials through the life cycle of the product radio frequency identification RFID makes internal processes more efficient and improves overall supply chain responsiveness Helping you bring your organization into the future RFID in the Supply Ch **RFID Metrics** William Oliver Hedgepeth, 2006-11-15 In today's hyper competitive business climate organizations are always under pressure to adapt to new technological trends or hot business process models Based on the author's experience testing and implementing RFID technology in both industrial and military cases this text explains how to evaluate the need for this technology The author focuses on what problems RFID is meant to solve if such problems exist in an organization and what metrics to use for effective decision making After establishing what RFID is and how it fits into the systems concept the book discusses current RFID applications around the world reveals key metrics for decision making as well as how to develop new metrics unique to RFID demonstrates a war game for exploring RFID and presents statistical methods for analyzing the data collected from the war games or gathered during implementation **RFID for the Supply Chain and Operations Professional** Pamela

Zelbst, 2012 The quality and effectiveness of decisions made within an organization and its supply chain depend upon the accuracy and timeliness of the information upon which they are based Radio Frequency Identification RFID is a technology that can provide more accurate information in near real time and thus increase the quality and timeliness of decisions based on that information RFID systems are currently in use in areas such as inventory management process control asset tracking and monitoring and retail point of sale Organizations which appropriately incorporate RFID into their operations and information management systems have increased their agility effectiveness and efficiency resulting in organizational growth and increased profitability The appropriate utilization of RFID allows organizations to become more agile resulting in their ability to respond to customers more efficiently and effectively Technology by itself does not result in improvements and RFID is no exception RFID is not a solution for every problem However when coupled with other appropriate technologies to address an appropriate objective RFID can offer a variety of benefits to businesses The proper integration into the firm's competitive plans and processes and the ability to leverage those technologies for competitive advantage results in increased performance for organizations The intent of this book is to provide a sufficient discussion of RFID to enable readers with no prior knowledge to develop a basic understanding of the technology The book discusses current applications and specific examples of RFID usage taken from a variety of industries The appropriate coupling of RFID with other technologies such as GPS ERP and robotics is discussed as well as an overview of the RFID implementation process This book will help readers develop an understanding of the capability of the technology to increase an organization's customer responsiveness

Global RFID Edmund W. Schuster, Stuart J. Allen, David L. Brock, 2007-01-25 At the same time I was a junior Brand

Manager at Procter Gamble worried about a much more mundane problem how to keep my products on the shelf Embedding RFID tags in the products and RFID readers in the shelf seemed like the perfect indeed the only way to do this But I needed RFID to be cheaper better and standardized in an open system In early 1999 by sheer chance I met Brock and Sarma The result was a potent meeting of minds I was looking to fund research and Brock Sarma and Siu were looking for research funding Working with Alan Haberman of the Uniform Code Council one of the founding fathers of the UPC bar code and Allan Boath of the Gillette Company we developed a plan for a new industry funded research consortium at MIT Haberman wanted to call it the Center For Automatic Identification And Data Capture At the last minute I persuaded him to abbreviate it to the Auto ID Center But my luck with names is hit and miss inspired by the bar code I had the bad idea of calling Auto ID Center's technology UPC2 Brock and Sarma saved the day one of them I cannot remember which proposed a far better alternative EPC for electronic product code The Auto ID Center opened on October 1 1999 P G loaned me to MIT to act as Executive Director and Sunny Siu was the first Research Director
