Applied Panel Data Analysis for Economic and Social Surveys Hans-Jürgen Andreß, Katrin Golsch, Alexander W. Schmidt, 2013-01-24 Many economic and social surveys are designed as panel studies which provide important data for describing social changes and testing causal relations between social phenomena This textbook shows how to manage describe and model these kinds of data It presents models for continuous and categorical dependent variables focusing either on the level of these variables at different points in time or on their change over time It covers fixed and random effects models models for change scores and event history models All statistical methods are explained in an application centered

style using research examples from scholarly journals which can be replicated by the reader through data provided on the accompanying website As all models are compared to each other it provides valuable assistance with choosing the right model in applied research The textbook is directed at master and doctoral students as well as applied researchers in the social sciences psychology business administration and economics Readers should be familiar with linear regression and have a good understanding of ordinary least squares estimation

Goodness-of-Fit Statistics for Discrete Multivariate Data Timothy R.C. Read, Noel A.C. Cressie, 2012-12-06 The statistical analysis of discrete multivariate data has received a great deal of attention in the statistics literature over the past two decades The development of appropriate models is the common theme of books such as Cox 1970 Haberman 1974 1978 1979 Bishop et al 1975 Gokhale and Kullback 1978 Upton 1978 Fienberg 1980 Plackett 1981 Agresti 1984 Goodman 1984 and Freeman 1987 The objective of our book differs from those listed above Rather than concentrating on model building our intention is to describe and assess the goodness of fit statistics used in the model verification part of the inference process Those books that emphasize model development tend to assume that the model can be tested with one of the traditional goodness of fit tests 2 2 e g Pearson's χ^2 or the loglikelihood ratio G using a chi squared critical value However it is well known that this can give a poor approximation in many circumstances This book provides the reader with a unified analysis of the traditional goodness of fit tests describing their behavior and relative merits as well as introducing some new test statistics The power divergence family of statistics Cressie and Read 1984 is used to link the traditional test statistics through a single real valued parameter and provides a way to consolidate and extend the current fragmented literature As a by product of our analysis a new 2 2 statistic emerges between Pearson's χ^2 and the loglikelihood ratio G that has some valuable properties
