Sensory Ecology How Organisms Acquire And Respond To Information:

Sensory Ecology David B. Dusenbery, 1992 This book aims to define and establish the field of sensory ecology Drawing knowledge from physics microbiology botany animal behaviour and psychology this landmark work provides a universal approach to understanding how organisms of all kinds obtain and use information about their environment A selection of technical background and problems should stimulate ideas and experiments

Sensory Ecology, Behaviour, and Evolution Martin Stevens, 2013-02-07 It deals with both mechanistic questions e.g.

Zintuigen Louw Feenstra V, 2016-02-12 Zonder zintuigen kan geen mens dier of plant overleven Wat is een zintuig eigenlijk Welke verschillen zijn er tussen mensen en dieren Hoe nemen we waar en wat daarvan is werkelijk en wat illusie Het Elementaire Deeltje Zintuigen beantwoordt dergelijke vragen en biedt een biomedisch en filosofisch perspectief op de bron van onze waarnemingen en ervaringen

Een Immense wereld Ed Yong, 2022-12-01 Een immense wereld leidt ons voorbij de grenzen van onze eigen zintuigen en verwelkomt ons in dimensies die voorheen ondoorgrondelijk waren de waarneming van de wereld door verschillende dieren Een van de 10 beste boeken van 2022 volgens The New York Times Book Review Wetenschapsjournalist Ed Yong leidt ons in Een immense wereld voorbij de grenzen van onze eigen zintuigen Hoe mensen de aarde waarnemen is maar een een van de vele perspectieven op onze wereld Net zoals elk dier zitten wij opgesloten in onze eigen unieke zintuiglijke bubbel en nemen we maar een heel klein deel waar van die immense wereld Dit boek verwelkomt ons in dimensies die voorheen ondoorgrondelijk waren de wereld zoals die wordt waargenomen door dieren We maken kennis met schildpadden die de magnetische velden van de aarde kunnen volgen we ontdekken dat de ogen van een reuzeninktvis gevolumeerd zijn om de glinstering van een walvis te kunnen zien en we leren wat zangvogels horen in hun melodie n Yong laat ons de geursporen elektromagnetische golven en drukpulsen om ons heen waarnemen Want om onze wereld te begrijpen hoeven we niet naar andere plaatsen te reizen we moeten door andere ogen kijken

[The Sensory Ecology of Birds](#) Graham R. Martin, 2017-03-30 Birds are renowned for their exceptional vision and the way that this enables them to survive and navigate the world in such a unique way However it is now recognised that avian behaviour is guided by information drawn from many different senses which are then used in integrated and complementary ways to answer the many different sensory challenges posed by specific environments and particular tasks Understanding how sensory information is used by birds has important applications in conservation such as providing vital insights into why birds are prone to collisions with structures like power lines and wind turbines and why so many diving birds become entrapped in nets A sensory ecology approach suggests how these problems can be mitigated The Sensory Ecology of Birds ranges widely across species environments and behaviours to present a synthesis that challenges previous assumptions about the information that controls the behaviour of birds A bird may use a wide range and combination of sensory information that comes from sight hearing smell mechanoreception taste and magnetoreception It may also include specific refinements of senses such as echolocation and

remote touch from the bill The book recognises that there are many complex and subtle trade offs and complementarities of information between different types of sensory information This accessible text will be of interest to a wide ornithological readership from undergraduates to researchers as well as a broader audience of behavioural ecologists and evolutionary biologists

Species of Mind Colin Allen, Marc Bekoff, 1999-07-26 The heart of this book is the reciprocal relationship between philosophical theories of mind and empirical studies of animal cognition Colin Allen a philosopher and Marc Bekoff a cognitive ethologist approach their work from a perspective that considers arguments about evolutionary continuity to be as applicable to the study of animal minds and brains as they are to comparative studies of kidneys stomachs and hearts Cognitive ethologists study the comparative evolutionary and ecological aspects of the mental phenomena of animals Philosophy can provide cognitive ethology with an analytical basis for attributing cognition to nonhuman animals and for studying it and cognitive ethology can help philosophy to explain mentality in naturalistic terms by providing data on the evolution of cognition This interdisciplinary approach reveals flaws in common objections to the view that animals have minds The heart of the book is this reciprocal relationship between philosophical theories of mind and empirical studies of animal cognition All theoretical discussion is carefully tied to case studies particularly in the areas of antipredatory vigilance and social play where there are many points of contact with philosophical discussions of intentionality and representation Allen and Bekoff make specific suggestions about how to use philosophical theories of intentionality as starting points for empirical investigation of animal minds and they stress the importance of studying animals other than nonhuman primates

Underwater Vehicles Alexander Inzartsev, 2009-01-01 For the latest twenty to thirty years a significant number of AUVs has been created for the solving of wide spectrum of scientific and applied tasks of ocean development and research For the short time period the AUVs have shown the efficiency at performance of complex search and inspection works and opened a number of new important applications Initially the information about AUVs had mainly review advertising character but now more attention is paid to practical achievements problems and systems technologies AUVs are losing their prototype status and have become a fully operational reliable and effective tool and modern multi purpose AUVs represent the new class of underwater robotic objects with inherent tasks and practical applications particular features of technology systems structure and functional properties

Auditory Spectral Processing Manuel S. Malmierca, Dexter R. F. Irvine, 2005-11-23 All natural auditory signals including human speech and animal communication signals are spectrally and temporally complex that is they contain multiple frequencies and their frequency composition or spectrum varies over time The ability of hearers to identify and localize these signals depends on analysis of their spectral composition For the overwhelming majority of human listeners spoken language is the major means of social communication and this communication therefore depends on spectral analysis Spectral analysis begins in the cochlea but is then elaborated at various stages along the auditory pathways in the brain that lead from the cochlea to the cerebral cortex The broad purpose of Auditory Spectral Processing is to provide a

comprehensive account of the way in which spectral information is processed in the brain and the way in which this information is used by listeners to identify and localize sounds Examines spectral processing mechanisms at different levels along the auditory neuraxis from the cochlear nucleus to the cortex Reviews in detail psychophysical and neurophysiological evidence on the way in which spectral information is processed within and across frequency channels Presents information on the nature of the spectral information required for speech and music perception Examines a series of issues that relate to the role of spectral analysis in higher order cognitive aspects of hearing and in clinical and applied contexts

The Tawny Owl Jeff Martin, 2022-09-29 Jeff Martin explores the Tawny Owl's natural history in the greatest detail Where controversy has arisen in the literature he has put forward all points of view so the reader can make his or her own judgements There seems nothing concerning the biology of this owl that Jeff has not researched Derek Bunn author of *The Barn Owl* The haunting calls of the Tawny Owl can be heard from Scandinavia in the north of its range to North Africa in the south Most people would consider it to be a common and widespread species throughout Europe but populations in Britain at least are declining and we need to understand more about the behaviour and ecology of this magnificent woodland bird if its future is to be secured Jeff Martin has been studying owls for decades and in this timely book he combines his personal observations together with those of other ornithologists and a comprehensive review of the literature resulting in some surprising revelations It was not long ago for example that the Tawny Owl was considered to be one of the most nocturnal of all owl species but in recent years it has been observed sunbathing calling and even hunting in broad daylight The Tawny Owl begins by exploring the research that has been undertaken over the last two centuries and the gaps that remain in our knowledge Subsequent chapters detail the evolution and classification of this relatively young species its status and distribution across Europe its feeding breeding and behavioural ecology why numbers are falling and what we can do about it Interestingly this silent hunter appears to be increasingly preying on passerine birds as forest degradation and destruction have had a negative impact on small mammal numbers The book concludes by looking at the role that Tawny Owls have played in British culture and whether the changes in behaviour and plumage among the British population could mean we have a new subspecies evolving on our island

Signs in the Dust Nathan Lyons, 2019-02-28 Modern thought is characterized by a dichotomy of meaningful culture and unmeaning nature *Signs in the Dust* uses medieval semiotics to develop a new theory of nature and culture that resists this familiar picture of things Nathan Lyons argues that culture is natural and nature is cultural through and through
