The Archaeology of Britain John Hunter, Ian Ralston, 2009-12-16 The Archaeology of Britain is the only concise and up-to-date introduction to the archaeological record of Britain from the reoccupation of the landmass by *Homo sapiens* during the later stages of the most recent Ice Age until last century. This fully revised second edition extends its coverage, including greater detail on the first millennium AD beyond the Anglo-Saxon domain and into recent times to look at the archaeological record produced by Britain's central role in two World Wars and the Cold War. The chapters are written by experts in their respective fields. Each is geared to provide an authoritative but accessible introduction, supported by numerous illustrations of key sites and finds, and a selective reference list to aid study in greater depth. It provides a one-stop textbook for the entire archaeology of Britain and reflects the most recent developments in archaeology both as a field subject and as an academic discipline. No other book provides such comprehensive coverage with such a wide chronological range of the archaeology of Britain. This collection is essential reading for undergraduates in archaeology and all those interested in British archaeology, history and geography.

Sun Above the Horizon Peter F. Varadi, 2014-05-23 The meteoric rise of the photovoltaic PV industry is an incredible story. In 2013, Google's investments in PV systems totaled about half a billion dollars, and Warren Buffett, one of the famous investors, invested 2.5 billion in the world's largest PV system in California. These gigantic investments by major financial players were made only 40 years after the first two terrestrial PV companies, Solarex and Solar Power Corporation, were formed in the USA. Back in 1973, the two companies employed 20 people and produced only 500 watts of PV power. Now, just 40 years later, over a million people work in the PV industry. The worldwide capacity of operating PV electric generators equals the capacity of about 25 nuclear power plants. The PV industry is growing at an annual rate of 30 percent, equivalent to about five new nuclear power plants per year. Today, solar electricity is a significant supplier of electricity needs to the extent that PV is forcing the restructuring of 100-year-old electric power utilities. This book describes how this happened and what lies ahead for PV power generation.
