Preparing and Delivering Technical Presentations , Designing Science Presentations Matt Carter, 2020-11-28 *Designing Science Presentations: A Visual Guide to Figures, Papers, Slides, Posters and More*, Second Edition, guides scientists of any discipline in the design of compelling science communication. Most scientists never receive formal training in the design, delivery and evaluation of scientific communication, yet these skills are essential for publishing in high quality journals, soliciting funding, attracting lab personnel and advancing a career. This clear, readable volume fills that gap, providing visually intensive guidance at every step, from the construction of original figures to the presentation and delivery of those figures in papers, slideshows, posters and websites. The book provides pragmatic advice on the preparation and delivery of exceptional scientific presentations and demonstrates hundreds of visually striking presentation techniques. Features clear headings for each section, indicating its message with graphic illustrations. Provides clear and concise explanations of design principles traditionally taught in design or visualization courses. Includes examples of high quality figures, page layouts, slides, posters and webpages to aid readers in creating their own presentations. Includes numerous before and after examples to illustrate the contrast between poor and outstanding presentations.

It also includes advice on presenting in English for non-native speakers, helping them to improve the clarity and effectiveness of their presentations. Links are included throughout the text to the accompanying website, which contains annotated video clips of speakers delivering a talk and demonstrates the common problems encountered, as well as exercises designed to overcome them.
