The methods in these three parts usually define a language for specifying process queries. The fourth part discusses methods that operate over inputs other than event logs and process models e.g. streams of process events or do not develop dedicated languages for specifying queries e.g. methods for assessing process model similarity. This book is mainly intended for researchers. All the chapters in this book are contributed by active researchers in the research disciplines of business process management, process mining and process querying. They describe state of the art methods for process querying, discuss use cases of process querying and suggest directions for future work for advancing the field.
