Machine Learning Guide for Oil and Gas Using Python Hoss Belyadi, Alireza Haghighat, 2021-04-09 Machine Learning Guide for Oil and Gas Using Python A Step by Step Breakdown with Data Algorithms Codes and Applications delivers a critical training and resource tool to help engineers understand machine learning theory and practice specifically referencing use cases in oil and gas The reference moves from explaining how Python works to step by step examples of utilization in various oil and gas scenarios such as well testing shale reservoirs and production optimization Petroleum engineers are quickly applying machine learning techniques to their data challenges but there is a lack of references beyond the math or heavy theory of machine learning Machine Learning Guide for Oil and Gas Using Python details the open source tool Python by explaining how it works at an introductory level then bridging into how to apply the algorithms into different oil and gas scenarios While similar resources are often too mathematical this book balances theory with applications including use cases that help solve different oil and gas data challenges Helps readers understand how open source Python can be utilized in practical oil and gas challenges Covers the most commonly used algorithms for both supervised and unsupervised learning Presents a balanced approach of both theory and practicality while

progressing from introductory to advanced analytical techniques

A Guide to Python GUI Programming with MySQL
Vivian Siahaan, Rismon Hasiholan Sianipar, 2020-01-14 In this book you will create two desktop applications using Python GUI and MySQL. In this book you will learn how to build from scratch a MySQL database management system using PyQt. In designing a GUI you will make use of the Qt Designer tool. Gradually and step by step you will be taught how to use MySQL in Python. In the first three chapters you will learn Basic MySQL statements including how to implement querying data, sorting data, filtering data, joining tables, grouping data, subquerying data, and setting operators. Aside from learning basic SQL statements you will also learn step by step how to develop stored procedures in MySQL. First we introduce you to the stored procedure concept and discuss when you should use it. Then we show you how to use the basic elements of the procedure code such as create procedure statement, if else case, loop, stored procedure's parameters. In the fourth chapter you will learn How PyQt and Qt Designer are used to create Python GUIs. How to create a basic Python GUI that utilizes a Line Edit and a Push Button. In the fifth chapter you will study Creating the initial three table in the School database project: Teacher table, Class table, and Subject table. Creating database configuration files. Creating a Python GUI for viewing and navigating the contents of each table. Creating a Python GUI for inserting and editing tables and Creating a Python GUI to merge and query the three tables. In chapter six you will learn Creating the main form to connect all forms. Creating a project that will add three more tables to the school database: the Student table, the Parent table, and the Tuition table. Creating a Python GUI to view and navigate the contents of each table. Creating a Python GUI for editing, inserting, and deleting records in each table. Create a Python GUI to merge and query the three tables and all six tables. In chapter seven you will create new database and configure it. In this chapter you will create Suspect table in crime database. This table has eleven columns: suspect_id primary key, suspect_name, birth_date, case_date, report_date, suspect_status, arrest_date, mother_name, address, telephone, and photo. You will also create GUI to display, edit, insert, and delete for this table. In chapter eight you will create a table with the name Feature_Extraction which has eight columns: feature_id primary key, suspect_id foreign key, feature1, feature2, feature3, feature4, feature5, and feature6. The six fields except keys will have a VARCHAR data type 200. You will also create GUI to display, edit, insert, and delete for this table. In chapter nine you will create two tables: Police and Investigator. The Police table has six columns: police_id primary key, province, city, address, telephone, and photo. The Investigator table has eight columns: investigator_id primary key, investigator_name, rank, birth_date, gender, address, telephone, and photo. You will also create GUI to display, edit, insert, and delete for both tables. In chapter ten you will create two tables: Victim and Case_File. The Victim table has nine columns: victim_id primary key, victim_name, crime_type, birth_date, crime_date, gender, address, telephone, and photo. The Case_File table has seven columns: case_file_id primary key, suspect_id foreign key, police_id foreign key, investigator_id foreign key, victim_id foreign key, status, and description. You will create GUI to display, edit, insert, and delete for both tables as well.
