Interdisciplinary Research in Diabetology Ali Tootee, Bagher Larijani, Ping Wang, 2024-10-04 The prevalence of diabetes has alarmingly increased in both developed and developing countries in recent years The prevalence of different complications and comorbid conditions associated with diabetes has also rampantly increased thereby endangering the lives of patients with diabetes In fact obesity which is associated with diabetes is currently a major global public health concern Nevertheless it can be argued that little progress has been made in the field of the management of diabetes during the past decades and many believe that the discovery of insulin was not followed by further significant advancements in the management of diabetes Diagnostic and screening approaches to diabetes have considerably evolved in recent decades

Saccharometers are replaced by glucometers and elaborated laboratory techniques However there are still limitations to such technologies and they cannot be used on large scales and in pediatric endocrinology they are not well complied with In fact it may be argued that the progress we have made in the management of diabetes has mainly focused on the invention of more efficient insulin preparations and improved techniques for its delivery
