QCD Higher-Order Effects and Search for New Physics Jian Wang, 2015-10-28 This book mainly investigates the precision predictions on the signal of new physics at the Large Hadron Collider LHC in the perturbative Quantum Chromodynamics QCD scheme The potential of the LHC to discover the signal of dark matter associated production with a photon is studied after including next to leading order QCD corrections The factorization and resummation of t channel top quark transverse momentum distribution in the standard model at both the Tevatron and the LHC with soft collinear effective theory are presented The potential of the early LHC to discover the signal of monotops is discussed These examples illustrate the method of searching for new physics beyond what is known today with high precision [Search for New Heavy Charged Bosons and Measurement of High-Mass Drell-Yan Production in Proton-Proton Collisions](#) Markus Zinser, 2018-09-25 This book presents two analyses the first of which involves the search for a new heavy charged gauge boson a so called W boson This new gauge boson is predicted by some theories extending the Standard Model gauge group to solve some of its conceptual problems Decays of the W boson in final states with a lepton l and the corresponding anti neutrino are considered Data collected by the ATLAS experiment in 2015 at a center of mass energy of $\sqrt{s} = 13$ TeV is used for the analysis In turn the second analysis presents a measurement of the double differential cross section of the process $pp \rightarrow Z \gamma X ll X$ including a $\gamma\gamma$ induced contribution at a center of mass energy of $\sqrt{s} = 8$ TeV The measurement is performed in an invariant mass region of 116 GeV to 1500 GeV as a function of invariant mass and absolute rapidity of the ll pair and as a function of invariant mass and pseudorapidity separation of the ll pair The data analyzed was recorded by the ATLAS experiment in 2012 and corresponds to an integrated luminosity of 20.3 fb It is expected that the measured cross sections are sensitive to the PDFs at very high values of the Bjorken x scaling variable and to the photon structure of the proton

Strangeness and Charge Symmetry Violation in Nucleon Structure Phiala Elisabeth Shanahan, 2016-05-11 This thesis discusses two key topics strangeness and charge symmetry violation CSV in the nucleon It also provides a pedagogical introduction to chiral effective field theory tailored to the high precision era of lattice quantum chromodynamics QCD Because the nucleon has zero net strangeness strange observables give tremendous insight into the nature of the vacuum they can only arise through quantum fluctuations in which strange anti-strange quark pairs are generated As a result the precise values of these quantities within QCD are important in physics arenas as diverse as precision tests of QCD searches for physics beyond the Standard Model and the interpretation of dark matter direct detection experiments Similarly the precise knowledge of CSV observables has with increasing experimental precision become essential to the interpretation of many searches for physics beyond the Standard Model In this thesis the numerical lattice gauge theory approach to QCD is combined with the chiral perturbation theory formalism to determine strange and CSV quantities in a diverse range of observables including the octet baryon masses sigma terms electromagnetic form factors and parton distribution functions This thesis builds a comprehensive and coherent picture of the current status of understanding of strangeness and charge symmetry violation in the nucleon

General Model Independent Searches for Physics Beyond the Standard Model Saranya Samik Ghosh, Thomas Hebbeker, Arnd Meyer, Tobias Pook, 2020-08-13 This primer describes the general model independent searches for new physics phenomena beyond the Standard Model of particle physics First the motivation for performing general model independent experimental searches for new physics is presented by giving an overview of the current theoretical understanding of particle physics in terms of the Standard Model of particle physics and its shortcomings Then the concept and features of general model independent search for new physics at collider based experiments is explained This is followed by an overview of such searches performed in past high energy physics experiments and the current status of such searches particularly in the context of the experiments at the LHC Finally the future prospects of such general model independent searches with possible improvements using new tools such as machine learning techniques is discussed

in Modern Physics ,1984 **Dijet Angular Distributions in Proton-Proton Collisions** Nele Boelaert,2011-10-26 This thesis is based on the first data from the Large Hadron Collider LHC at CERN Its theme can be described as the classical Rutherford scattering experiment adapted to the LHC measurement of scattering angles to search for new physics and substructure At the LHC colliding quarks and gluons exit the proton collisions as collimated particle showers or jets The thesis presents studies of the scattering angles of these jets It includes a phenomenological study at the LHC design energy of 14 TeV where a model of so called large extra dimensions is used as a benchmark process for the sensitivity to new physics The experimental result is the first measurement made in 2010 by ATLAS operating at the LHC start up energy of 7 TeV The result is compatible with the Standard Model and demonstrates how well the physics and the apparatus are understood The first data is a tiny fraction of what will be accumulated in the coming years and this study has set the stage for performing these measurements with confidence as the LHC accumulates luminosity and increases its energy thereby probing smaller length scales **Proceedings of the XXV DAE-BRNS High Energy Physics (HEP) Symposium 2022, 12-16**

1 P Ramadevi,2013-01-15 The recent discovery at the Large Hadron Collider of what is very likely the Higgs particle has given a fillip to research in High Energy physics These experiments hold the promise of a glimpse of physics beyond the Standard Model which while having been verified to great accuracy cannot be the final theory Uncomfortable gaps both theoretical and experimental remain in our understanding Lecture notes from the SERC School in Theoretical High Energy Physics held at IIT Bombay in February 2008 are contained in this volume Topics that were covered then are of continuing importance more so in the light of the ongoing LHC experiment The various chapters in the book include an extensive survey of LHC physics that together with formal aspects and models of supersymmetry review the state of the art in our understanding of the Standard Model and beyond The article on B Physics and CP violations add to this while the chapter on thermal field theory reviews the formalism necessary to understand the early universe and to embark on an analysis of quark gluon plasma in heavy ion collisions Written in a clear pedagogic style by active researchers this text will prepare a beginner to work in the field and at the same time will also provide useful reference material for active researchers
